

Health Information for Parents and Caregivers

Dear Parents/Caregiver

The school is delighted to announce a significant evolution in the gathering and delivery of health information for our Students.

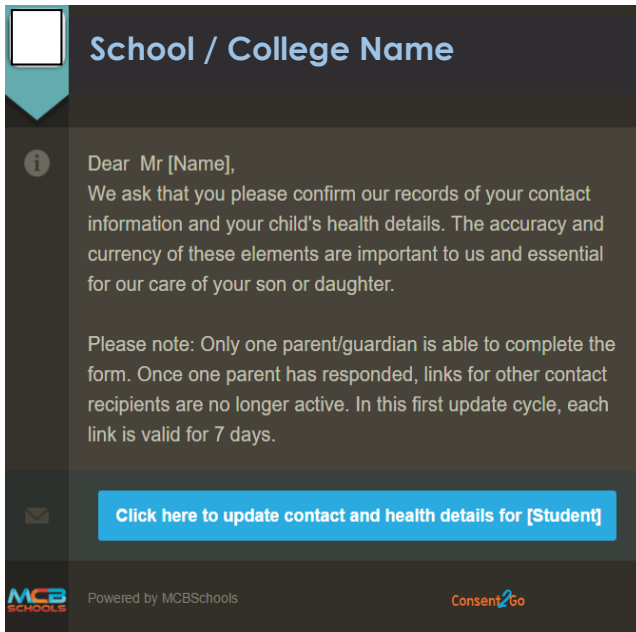

As all parents and caregivers would appreciate, the accuracy and management of student health records is a critical process for all schools. Government legislation in this space is placing further responsibilities on schools, while also requiring clear and consistent communication between schools and families to ensure that optimum care is provided for all students.

After careful evaluation of our needs and providers in this field, Baldivis Secondary College has partnered with Consent2Go.

This system allows the school to capture and confirm health information on your child in an accurate and timely manner through a secure process. There are a multitude of benefits and opportunities that are achieved by using this system, with positive advancements in areas such as excursion approvals, risk management and sports communication and management.

This system replaces the paper-based process of inquiry and confirmation. The ease and convenience of this on line solution will, we believe, be a most pleasing advantage for all parents and caregivers, especially for ongoing medical updates and excursion consents that are a regular and important part of any school's programme.

The picture (see below) shows the style of message that you will be receiving. Parents and caregivers might check spam folders should the email not be received within the timeframe indicated.

By simply clicking on the blue box you will be automatically connected to the system. There is no username or password required to use the system. A secure link is sent to the email addresses of the primary contact/s for each student, where only one parent is required to complete the form.

You will be asked to update your contact details and your child's medical information, and most of your pre-existing record of information will be already uploaded to your file.

We would ask that you carefully check through each field, especially those pertaining to your child's medical conditions (as found on the third page/screen of the form). There are

numerous conditions listed, with the facility to list additional conditions in the 'Other' category should your child's specific condition not be listed. Parents can easily update and change your details and your child's medical information if and when required through the system.

Should you encounter any questions through your completion of this process, there is a 'Need Help?' icon at the top right of each screen, and the technicians at Consent2Go will be available to assist you with your inquiry. As always, staff at reception can be contacted for matters pertinent to the college.

I trust that you will find this system a useful instrument in the completion and maintenance of this critical area of schooling practice.

Yours sincerely,

Karen Illich
